

RAMP MD Board of Directors

Randy Altschuler
Nextline Manufacturing

Jan Baum
3D Maryland

Dr. Mary Way Bolt
Cecil College

John Desmone
Towson University

Chris Cosgrove
SURVICE Engineering

Robert Daidone
Orbital ATK

Bruce England, Susquehanna
Workforce Network

Jeff Fuchs
MD Advisory Commission on
Manufacturing Competitiveness

Mike Galiazzo
Regional Manufacturing Institute

Michael Gill
MD Department of Business and
Economic Development

Mary Hastler
Harford County Public Library

Karen Holt
Harford County Office of
Economic Development

Rod Hudson
Quicksilver Analytics

Dr. Jeffrey Lawson
Cecil County Public Schools

Rob Limpert
Harford County Public Schools

John Mayhorne
Harford Community College

Harry McArthur, Terumo

Jill McClune
Army Alliance

Dan McDermott
Upper Shore Workforce
Investment Board

Morgan Miller
Cecil County Public Library

Mike Parker, NMTC

Mark Schlein, Edgewood
Chemical Biological Center

Lisa Webb, Cecil County Office
of Economic Development

Dave Wheatley
D. Wheatley Enterprises, Inc.

The Regional Additive Manufacturing Partnership of Maryland (RAMP MD) was formed by the Maryland General Assembly in 2014 to expand the state's capabilities in additive manufacturing. RAMP MD is a consortium of private businesses, educational institutions, and governmental agencies, working together to:

- Provide businesses access to additive manufacturing facilities, equipment, and expertise
- Build the required infrastructure to support the manufacturing base
- Educate a supporting workforce

Additive manufacturing is the process of producing a three-dimensional object from a digital file by layering materials, and it is revolutionizing the way products are designed and manufactured.

The process starts with a 3D computer-aided design file. This file is sent to a 3D printer, which then creates layers upon layers of precisely measured and formed materials, such as plastics, rubber, metals, or ceramics. This is different from traditional manufacturing technologies, which is considered a "subtractive" process where you start with a block of material and remove what you don't need. As a result, additive manufacturing can be more efficient, flexible, and less wasteful.

Additive manufacturing represents a dramatic shift in how products are designed, manufactured, and ultimately distributed. Because the industry is in its infancy, the equipment and expertise are still beyond the reach of most businesses. RAMP MD solves this problem for Maryland companies.

Through RAMP MD, companies partner with the U.S. Army Edgewood Chemical Biological Center, which has some of the most advanced additive manufacturing capabilities in the nation and has been using additive manufacturing technology for over 25 years. The collaboration permits manufacturers to move a product from inspiration to production faster than ever.

RAMP MD currently holds partnership agreements with 10 industry partners and is in the process of negotiating more. RAMP MD is also working with Maryland educational institutions to develop pathways into high-tech, high-pay additive manufacturing careers.

Regional leaders are just beginning to recognize the tremendous impact additive manufacturing will have on our communities. Not only will the capability create new high-tech jobs for people of all skill levels, it has the potential to change the way we live, work, and play.

For more information about partnering with RAMP MD, contact RAMP MD Executive Director Rick Decker at 410-591-7075.
